

Sustainability Quick Guide Printing & Packaging Inks and Coatings

Sustainability demands in printing & packaging coatings

Additives to meet the demands

We support sustainable developments in printing and packaging industries by offering formulation additives that help reduce emissions, enhance resource efficiency, offer global registrations and compliance with relevant food contact regulations.

Food contact

Our broad range of food-contact compliant raw materials gives formulators greater freedom in formulating inks and coatings.

Lower emissions

Low-VOC formulation additives from BASF help reduce emissions by enabling water-based and 100% systems that deliver similar performance to solvent-based solutions.

Resource efficiency

We provide highly efficient dispersing agents that accelerate pigment dispersion, the most energy-consuming production phase in inks and coatings. They also allow for maximum color strength and stability, for more efficient use of pigments.

Formulation additives for more sustainable printing & packaging coatings

	Dispersing agents	Defoamers	Rheology modifiers	Film-forming agents	Wetting agents and surface modifiers

*Compliance statements available. **Not intentionally added. Product may comprise minor traces as ubiquitously occurring impurities cannot be excluded.

“Our customers increasingly need additives with food-contact approval to formulate high-quality printing inks – and we can meet those needs. That’s sustainability I can believe in.”
